

THE ANTTILIS MISSION

You play the part of captain Alan Henson. Your mission is to pilot the Anttilis rescue vessel to the location of the ZX3 experimental sub, which has sunk to the bottom of the Atlantic ocean. You must dock with the ZX3 and gain entry. You have been given the top secret ZX3 scan report which gives you an idea of what you are up against. Your mission is vital, if the malfunctioning android crew manage to arm all 40 nuclear missiles they will automatically launch. If this happens, the high radiation from these exploding missiles would cause all life on this planet to cease! The ZX3 must be brought to the surface at all costs.

MISSION OBJECTIVES...

- 1: Neutralise all malfunctioning androids.
- 2: Disarm as many nuclear missiles as possible.

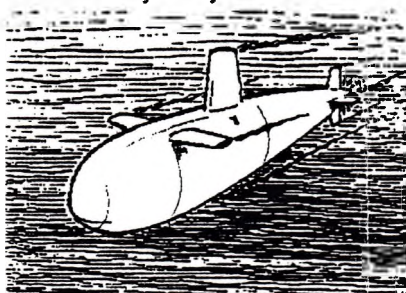

Note: Malfunctioning androids will arm missiles.

- 3: Locate sub's main computer and get it functional.

To load the game type in LOAD "" and ENTER.

ZX3 COMPUTER SCANNING REPORT.

ZX3 being bombarded by high powered neutrons.... Beginning to effect all subs control systems. Outside scan shows ZX3 surrounded by heavy neutron field.

Unable to transmit out and losing all primary electrical systems.

Androids malfunctioning on all levels, attempting to keep control of android 1, but low power readings from that unit.

Closing down main computer memory core to preserve programming. Watertight doors, energiser units and decontamination units on overload, malfunction imminent.

Reactor beginning to leak, high radiation within ZX3's hull. Depth at 14 miles, beginning to stabilize.... Launching information in COMLINK pod, shut down procedure has been activated.....

END OF REPORT....
